PHYSICAL THERAPY

Patient: Lisa A English

Age: 61 y.o.

DOB: 7/25/1964

Narrative

Attempt. Pt adamantly declining all activity at this time, despite encouragement/education. Pt reporting "needing medications to settle," pt agreeable to PTA/COTA returning ~1300.

Tx. Pt in bed upon arrival. Pt needing mod encouragement for participation in PTA/COTA cotx as earlier pt stating agreeable for sliding board transfer to chair then attempting standing with BUE support to bedrails. Pt with incredibly high anxiety, talking in circles, and minimally allowing therapists to get a word in. Pt very particular with placement of items in room. Pt with increased c/o nausea and SOB- SpO2 92% throughout tx as pt assessing on personal pulse-ox. Attempted safety education as pt wanting to complete sliding board transfer to L side, however pt adamantly declining repositioning Bipap d/t positioning of cords tangled in bedrail. Assistance given to don socks. Pt fully elevates HOB. Assistance given to place sliding board. Pt adamantly refusing gait belt. Pt completed sliding board transfer to chair (to R side) with supervision/touch assist. Pt then refusing attempting standing, despite encouragement. Pt remained sitting in chair with alarm on and all needs in reach. Pt currently agreeable to attempt standing with bedrail support during next tx- requesting ~1400. RT entering room upon departure.

Recommendations

Therapy Recommendations: Pt would benefit from continued therapy at a facility level

Barriers to Discharge: Does not have assist needed for safe mobility/balance, Unable to negotiate home entry/exit safely, High risk for hospital readmission, Decreased cognition/safety awareness

Equipment Recommended: Rolling walker, Reacher, Sock aid, Long-handled sponge

This discharge disposition is recommended by PT based on this assessment; however, ultimate discharge disposition will be decided collaboratively with patient, caregivers, and multidisciplinary team.

Outcome Measure

Basic Mobility Raw Score: 12 (06/23/26 1325)
Basic Mobility T-Scale Score: 32.23 (06/23/26 1325)

Plan

Treatment/Interventions: Transfer training, Balance training, LE strengthening/ROM, Endurance training, Patient/Family education, Gait training, Bed mobility, Home exercise program, Safety education

Progress: Slow progress, medical status limitations

PT Frequency: 6x/week

Prior Level of Function

Permanent Residence: Home

Home Layout: One level, Ramped entrance

Home Equipment Available : Rolling Walker, Cane, Manual wheelchair, CPAP/BiPAP, Oxygen, Drop arm bedside commode (bariatric BSC, slide pad, slide board)

Prior Device Use: Motorized wheelchair or scooter, Mechanical lift

Self Care (New): Needed some help

Indoor Mobility (Ambulation) (New): Needed some help

Stairs (New): Not applicable

Functional Cognition (New): Independent

Who do you live with?: Adult Child (son)

Transfers

Rolling left and right: Supervision or touching assistance

Lying to sitting on side of bed: Independent, Using bedrail, HOB elevated

Sitting to lying: Up in chair after treatment

Sit to Stand: Patient refused

Chair/bed to chair transfer: Supervision or touching assistance

Balance

Sitting - Static: Supervision or touching assistance

Sitting - Dynamic: Supervision or touching assistance (SBA/CGA sliding board transfer)

Standing - Static: Unable to assess

Standing - Dynamic: Unable to assess
